Education

Master studies

Faculty of Mathematics, University of Belgrade

2017 -
today

Bachelor of science in informatics

Faculty of Mathematics, University of Belgrade

2014 - 2017

Projets

Bank Keyboard

Team project (2 members) for an international bank. Keyboard that allows user to send money by clicking one button and following a short form. Different designs for Android and iOS, all packed in Xamarin application with banks mBanking application.

2018

Implemented in Xamarin

Sprinklesoft

<https://www.sprinklesoft.net/>

Complete website made for a small team (I am part of it). The site contains projects that we worked on and information about us. Website is fully responsive with custom made animations and contains our projects that are loaded from MySQL database.

2017

Frontend: HTML5/CSS3, jQuery, Bootstrap

Backend: PHP, MySQL

DIG

<https://www.dig.rs>

Complete CMS, web design and testing for a clothing store named DIG. The website contains a cart system, dynamic content that the store's staff can create, edit or delete, and a system for managing orders and sales.

2016 - 2017

Frontend: HTML5/CSS3, jQuery

Backend: PHP, MySQL

Testing: CasperJS

Collynx

<https://github.com/kredenac/RS10-collynx>

2017

Team project (4 members) for a faculty course. People can collaborate and explain their ideas easily by drawing on a shared board. Users can elaborate on an existing picture, pdf, presentation, therefore it is also useful offline for presentations and teaching since it allows the user to draw over other running programs. Application was developed using pair programming technique mostly. My focus was on custom shapes, GUI, brush settings, collecting data from backend and storing it on client device.

Frontend: Qt, C++ Backend: Python

Glide Through Sky

<https://github.com/kredenac/RS10-collynx>

2017

Glide Through Sky is a game inspired by Flappy Bird. The player constantly goes forward while being able to jump and dash. The player spends mana for dashing which he recovers by beating enemies and collecting crystals. The goal is to pass as many obstacles as possible. My focus was to develop low polygon game for lower spec PCs, that keeps consistent and polished aesthetics by randomly generating matching colors and animating game objects smoothly.

Implemented in C, OpenGL, GLUT

Awards

MatHack

Faculty of Mathematics, Belgrade, 2nd place

May 2018

Trajectory generation using machine learning

Deep Web Hackathon

Brasidas, Belgrade, 2nd place

April 2017

Website analysis (Regular and deep/dark web)

Beyond Hackathon

Eurobank, Athens, 2nd place (of 38 teams)

March 2017

Eurobank voice assistant

Skills

Programming Languages

Python C/C++ C#
